Cape Town Statement on Geoethics

"...Geosciences have major impacts on the functioning and knowledge-base of modern societies. Geoscientists have specific knowledge and skills, which are required to investigate, manage and intervene in various components of the Earth system... by increasing researchers' and practitioners' awareness of the ethical implications of their work is it possible to develop excellent geoscience to serve society and to reduce the human impact on the environment..."

Drivers for Management: Knowledge Society & Citizens' involvement

- ***The ongoing scientific-technical revolution and its industrial-societal expression leaves huge parts of the societies and their governments in the role of a spectator;***
- ***Such a situation is a perfect receipt for frustration, resistance and obstruction;***
- ***Citizen science is a means to gain insights into the application of science, research and technological development, which relates to daily practice and involves the citizen actively;***
